# Sanketh Sequeira

+1 (312) 394-0476 | ssequ@uic.edu | LinkedIn | GitHub | Portfolio

## Education

**University of Illinois Chicago** Expected May 2027
Master of Science in Computer Science GPA: 3.8/4.0

**Global Academy of Technology** Jul 2025
Bachelor of Engineering in Information Science and Engineering GPA: 9.02/10

## Skills

**Programming Languages:** Python, Java, C#, SQL, JavaScript
**AI and ML:** PyTorch, LLMs, RAG, Agentic AI, LangGraph, Tool Calling, Agent Evaluation
**Systems and Cloud:** FastAPI, PostgreSQL, Langfuse, Observability, Docker, AWS EC2, Linux, CI/CD

## Experience

**Full-Stack Developer,** UIC College of Engineering – Chicago, IL Jun 2026 – Present
- Centralized spreadsheet/email budgeting workflows for 5–6 departments by translating stakeholder requirements into epics/user stories and delivering React/Node.js applications backed by Express, Sequelize, and MySQL.
- Secured financial data operations with two-phase imports for up to 5,000 records, transactional writes, scoped RBAC, immutable auditing, and UIC Shibboleth/SAML.
- Improved release reliability with GitHub Actions CI on development pushes/PRs, running frontend/backend tests, builds, and Docker validation before manual Linux VM deployment.

**Full-Stack Developer,** UIC School of Public Health – Chicago, IL Dec 2025 – Jun 2026
- Eliminated manual email handoffs from a semester-based internship approval workflow for 200+ users by building two ASP.NET Web Forms applications for UIC and external users.

**Software Engineer Intern,** KreedaLoka – Bangalore, India Jul 2023 – Dec 2023
- Delivered a new ChessEra arena game mode for 500+ users across 4 academies by building matchmaking and real-time leaderboard systems using Java, C#, Unity, and WebSockets.

## Projects

**TraceFix**, Agent-as-a-Judge Optimizer | GitHub Sep 2026
- Building a self-hosted Agent-as-a-Judge system with LangGraph and Langfuse to diagnose ReAct failures from traces, tool calls, latency, token usage, and failure history.
- Developing a closed-loop evaluation pipeline that modifies prompts/tool policies, reruns benchmark tasks, and accepts or rolls back agent variants based on task success, cost, and latency.

**DocBot**, Retrieval-Augmented Developer Assistant | GitHub Sep 2025
- Built an AI-powered developer documentation assistant across 10 Python libraries using SentenceTransformer embeddings, top-k information retrieval, FastAPI, and PostgreSQL.
- Balanced response quality, cost, and latency by tuning chunk size and retrieval depth and reusing precomputed embeddings instead of rescanning documents.

**OBDPlus**, AI-Powered Vehicle Diagnostics | GitHub Dec 2025
- Validated LLM-based diagnostics across 12 live OBD-II parameters and 13 synthetic fault scenarios by combining vehicle telemetry, DTC knowledge, and diagnostic context.
- Deployed separate API and AI FastAPI services on AWS EC2/Linux with Docker Compose, Supabase storage, bounded timeouts, retries, and defensive failure handling.
