Skills

Programming Languages: Java, C#, Python, C++, C, SQL, JavaScript

Frameworks and Backend: React, Node.js, Express, ASP.NET, FastAPI, REST APIs, WebSockets

Cloud and Data: AWS EC2, Docker, Linux, MySQL, SQL Server, PostgreSQL, Sequelize, Git

Experience

FullStack Developer, UIC College of Engineering – Chicago, IL Jun 2026 – Present

- Centralized spreadsheet- and email-based budgeting workflows for 5–6 departments by building two React, Node.js, Express, Sequelize, and MySQL applications.
- Prevented stale financial changes from overwriting newer updates by implementing SHA-256 snapshots, row locks, conflict detection, and atomic draft publishing.
- Secured bulk financial and salary imports of up to 5,000 records per operation with two-phase validation, single-use previews, dataset fingerprints, and transactional commits.
- Made Box/MySQL document operations crash-recoverable with idempotent uploads, structural file validation, malware scanning, compensating deletes, and reconciliation jobs.

FullStack Developer, UIC School of Public Health – Chicago, IL Dec 2025 – Jun 2026

- Eliminated manual email handoffs from a semester-based internship approval workflow for 200+ users by building two ASP.NET Web Forms applications for UIC and external users.
- Centralized forms, step-by-step workflow guidance, and automated notifications while improving backend reliability through SQL Server schema and query optimization.

Software Engineer Intern, Kreedaloka – Bangalore, India Jul 2023 – Dec 2023

- Delivered a new ChessEra arena game mode for 500+ users across 4 academies by designing matchmaking algorithms and real-time leaderboards using Java, C#, and Unity.
- Maintained consistent low-latency game state across concurrent sessions by implementing WebSocket matchmaking and SQL-backed pairing logic.

Projects

OBDPlus, Distributed Vehicle Diagnostic Platform Dec 2025

- Separated vehicle I/O, API handling, and AI inference into two FastAPI services deployed on AWS EC2/Linux with Docker Compose, REST networking, and Supabase storage.
- Validated diagnostic workflows across 12 live OBD-II parameters and 13 synthetic fault scenarios using OBDSim over TCP and Windows serial interfaces.

DocBot, Developer Documentation RAG Sep 2025

- Built a FastAPI RAG assistant over 10 Python libraries with SentenceTransformer embeddings, top-k retrieval, PostgreSQL metadata, and role-based access.

Education

University of Illinois Chicago Expected May 2027

Master of Science in Computer Science GPA: 3.8/4.0

Global Academy of Technology Jul 2025

Bachelor of Engineering in Information Science and Engineering GPA: 9.02/10
