

Sanketh Sequeira

+1 (312) 394-0476 | ssequ@uic.edu | LinkedIn | GitHub | Portfolio

Skills

Programming Languages: Java, C#, Python, C++, C, SQL, JavaScript

Frameworks and Backend: React, Node.js, Express, ASP.NET, FastAPI, REST APIs, WebSockets

Cloud and Tools: AWS EC2, Docker, GitHub Actions, CI/CD, Linux, MySQL, SQL Server, Git, Jira

Experience

FullStack Developer, UIC College of Engineering – Chicago, IL Jun 2026 – Present

- Centralized spreadsheet/email budgeting workflows for 5–6 departments by co-creating epics/user stories and delivering React/Node.js applications backed by Express, Sequelize, and MySQL.
- Prevented stale financial changes from overwriting newer updates by implementing SHA-256 snapshots, row locks, conflict detection, and atomic draft publishing.
- Improved release reliability with GitHub Actions CI on development pushes/PRs, running frontend/backend tests, builds, and Docker validation before manual Linux VM deployment.
- Automating prerequisite-compliance checks by parsing degree audits and validating completed/in-progress courses against department-verified prerequisite, corequisite, and concurrent rules.

FullStack Developer, UIC School of Public Health – Chicago, IL Dec 2025 – Jun 2026

- Eliminated manual email handoffs from a semester-based internship approval workflow for 200+ users by building two ASP.NET Web Forms applications for UIC and external users.
- Created role-specific end-user documentation and step-by-step workflow guidance for students, faculty, preceptors, and administrators, alongside automated email notifications at each approval stage.

Software Engineer Intern, KreedaLoka – Bangalore, India Jul 2023 – Dec 2023

- Delivered a new ChessEra arena game mode for 500+ users across 4 academies by designing matchmaking algorithms and real-time leaderboards using Java, C#, and Unity.
- Maintained consistent low-latency game state across concurrent sessions by implementing WebSocket matchmaking and SQL-backed pairing logic.

Projects

OBDPlus, Distributed Vehicle Diagnostic Platform | GitHub Dec 2025

- Separated vehicle I/O, API handling, and AI inference into two FastAPI services deployed on AWS EC2/Linux with Docker Compose, REST networking, and Supabase storage.
- Validated diagnostic workflows across 12 live OBD-II parameters and 13 synthetic fault scenarios using OBDSim over TCP and Windows serial interfaces.

DocBot, Developer Documentation RAG | GitHub Sep 2025

- Built a FastAPI RAG assistant over 10 Python libraries with SentenceTransformer embeddings, top-k retrieval, PostgreSQL metadata, and role-based access.

Education

University of Illinois Chicago Expected May 2027

Master of Science in Computer Science GPA: 3.8/4.0

Global Academy of Technology Jul 2025

Bachelor of Engineering in Information Science and Engineering GPA: 9.02/10
